The norwegian sector apprechiates your suggestion to allow <ocpVis> also for visualisations of <controller>s in railML2.4. We will use it like that in railML2.4.

We are OK with your suggestion to add <controllerVis> and <any> to allow <*Vis> in railML2.5. But we would suggest to rather change <ocpVis> to <objectVis> and use it for any visualisation that is not on the tracks/line. This as its redundant to declare the element type to be visualised as the information is available in the referenced element.
