Dear all,

for the TAF TSI is a similar attribute "TimingQualifierCode" in use to describe the scope of a given timing. The following 8 values are possible:

PLA = Public Location Arrival
ELA = Earliest Location Arrival
ALA = Actual Location Arrival
LLA = Latest Location Arrival
PLD = Public Location Departure
ELD = Earliest Location Departure
ALD = Actual Location Departure
LLD = Latest Location Departure

It would be useful to align the values proposed for railML with those in use for the TAF TSI.

Best regards,

Stefan Jugelt
