Dear all,

this is my first post in timetable forum: nice to meet you.

I'm looking for a way to describe turnback association between trains using timetable domain. I mean a train (trainA) that goes to an ocp and then depart from there as a new train (trainB). Is there a way to explicitly describe this association?

I figured out different options but I'm not sure if they are valid and which is the best one.

1- make usage of rostering

2- make usage of trainGroups

3- make usage of connection in last ocpTT

Thanks

BR

FAbrizio
