> Comments, please.

That is a difficult question. In my understanding the daylight saving time resp. the boolean you suggested is a changing parameter and not fixed like the timezone information of an ocp. Therefore, I would not consider it within the infrastructure schema, but somewhere in the timetable schema, since it is relevant for operation and depends on the current date/time.

However, I want to hear Joachim's opinion on this first before implementing it.

Best regards
Christian
