Dear all,

Torben Brand wrote on Fri, 11 June 2021 13:21Hi,

I would like to make you aware of the proposal for a generic area in railML2.5 (but now postponed for 2.6).
Orriginal proposal (found here   https://www.railml.org/forum/index.php?t=msg&th=804& goto=2681&#msg_2681) was for UC for trac sections (for TVD), but implementation as in railML2.4nor (See chapter 4.6 in   https://www.jernbanedirektoratet.no/globalassets/documenter/ railml/20201217_railml2.4norisdocumentation_v1.4.pdf) is generic and could also be used for the purpose of an OCP information area.

I appreciate Torben's idea of fusing the approaches of the generic <area> and the OCP's informationArea. What does the community think about it? And secondly, is it sufficient to have the OCP's informationArea implemented with railML 2.6 (like planned for the generic <area> element)?

Any comments are very much welcome...

Best regards
Christian
