Subject: Re: [railML2] Adding a new element informationArea to ocp
Posted by Milan Wölke on Tue, 27 Jul 2021 12:28:20 GMT

Hi Christian,

First of all thanks for the work you put in this. The timetable developer group asked me to respond on their behalves to let you know that with your latest changes all wishes have been fulfilled. This should work for our usecases nicely and it should allow for future usage of areas in other use cases as well.

Placing the informationAreaRef inside a propPassengerInformation is a good idea from our point of view and could also be applied to the other places related to passenger information namely //track/mediaResources and   //track/trackElements/platformEdges/platformEdge/mediaResources.

Thanks again for the your gr8 work.

Best regards, Milan
