Dear Milan,  
dear all,

when we want to use <propPassengerInfo> not only with <ocp>, but also with <track> and <platformEdge>, the question arises, if this <propPassengerInfo> shall be generic or specific. In particular:

- \* using a generic <propPassengerInfo> would allow <informationArea> elements not only for <ocp>, but also for <platformEdge> and <track> elements.

- \* using a specific <propPassengerInfo> implementation could be used to restrict <informationArea> elements only for <ocp>

What do you think: do we need <informationArea> also for <track> and <platformEdge>?

Best regards  
Christian
