Hello Milan,

thank you for your feedback. I followed your advice and implemented it the specific way in railML 2.5: There is now a child element <propPassengerInfo> for <track>, <ocp> and <platformEdge> encapsulating the <mediaResources>, but only for the element <ocp> the child element <propPassengerInfo/informationArea> exists.

All the details can be found in Trac tickets #393 [1], #473 [2] and #477 [3].

[1] <https://trac.railml.org/ticket/393>

[2] <https://trac.railml.org/ticket/473>

[3] <https://trac.railml.org/ticket/477>

Best regards

Christian
