Dear all,

in the last phone conference of the timetable developers we discussed our position on this issue. A majority of the timetable developers voted for having this information in timetable. Among other things transfer times were seen as related to passengers and thus rather timetable than infrastructure. Another argument was that transfer times are a central part of connection modelling and therefore should be defined by timetable as the connections are part of timetable as well. If there is no veto on this, we would accordingly introduce some kind of matrix like structure in the root of timetable v3 in order to allow central modelling of default minimum transfer times, probably with optional linking to the timetable period.

Best regards, Milan
