Subject: [railML2] Scope of ocpTT.trainReverse

Dear TT community,

Could anyone please clarify the scope of the attribute ocpTT.trainReverse? According to this Wiki
entry (section "Semantical background"), it refers to the train containing it. For various reasons (I'd
be willing to give an example if the topic should prove to be controversial), I would expect it to
relate to its trainPart only.

Best regards,
Andrea Hoffmann
