Subject: [railML3.2 beta 2]: Visualization Subschema missing

Dear community

The recently published railML 3.2 beta 2 seems to be missing the reference to the visualization subschema.

The file visualizations3.xsd is part of the package (and also has changes compared to the railML 3.2 beta 1 version), but is not referenced anymore in the railml3.xsd file.

The documentation file also does not mention the visualizations anymore.

As I cannot remember hearing or reading something about a discontinuation of the visualization subschema, I suppose this happened involuntarily. Since our tool railOscope exports visualization information, we rely on having this subschema included in this version.

Thank you for your feedback.

Best regards,  
Dominik Looser
