Subject: [railML3.2 beta 2]: Visualization Subschema missing Posted by Dominik Looser on Tue, 04 Jan 2022 09:08:03 GMT View Forum Message <> Reply to Message

Dear community

The recently published railML 3.2 beta 2 seems to be missing the reference to the visualization subschema.

The file visualizations3.xsd is part of the package (and also has changes compared to the railML 3.2 beta 1 version), but is not referenced anymore in the railml3.xsd file.

The documentation file also does not mention the visualizations anymore.

As I cannot remember hearing or reading something about a discontinuation of the visualization subschema, I suppose this happened involuntarily. Since our tool railOscope exports visualization information, we rely on having this subschema included in this version.

Thank you for your feedback.

Best regards, Dominik Looser trafIT solutions gmbh
