The current contents of the serviceSections are strongly driven by the needs of maintenance of the rolling stock.

Of course, there is also a need to do maintenance to the infrastructure assets.

One scenario which might apply here:

- a) Identify a serviceSection which is capable to do maintenance of infrastructure equipment
- b) staff with a GPS-equipped handheld device must be allocated at a certain landmark, before a switch is operated to check the successful maintenance.

So, what do you think of introducing optional attributes:

- a) serviceSection@isInfrastructureMaintenanceWorkshop
- b) serviceSection@isInfrastructureMaintenanceSafetyLocation

Of course, further scenarios for maintenance of the infrastructure may be possible, too.
Feel free to contribute with your ideas.
