There should be a discussion about the semantics of Â« signals Â» and

value or by element names.

A future <panels> may hold all types of panels, e.g. speedPanels. Those panels should get a trackside attribute (information important because they are physically installed on the track).

- <LevelCrossingPanels>
- <catenarySectioningPanels>
- <currentPanels>
- <pantographPanels>
- <fixedSignalingChangePanels>
- <linePanels>
- <gsmPanels>
- <radioPanels>

New type of element should be added in the standard to describe the panels from the infrastructure of the railway.

[de: Wie koennen variable Signale und fixe Signaltafel in railML unterschieden werden? Eine Liste moeglicher Signaltafeln wurde oben vorgeschlagen. ]
