Hello,
a proposal for additional signal attributes:

ILSName:

Description: Name of the interlocking system (ILS).

Type: String

StationName

Description: Name of the station.

Type: String

Maskable

Description: Is the signal maskable (dunkelschaltbar)?

Type: Boolean

Proceedable

Description: Is the signal proceedable (selbststellbar)?

Type: Boolean

TMaxSupplAspect

Description: Maximum time for the train to pass the signal with a supplementary aspect.

Type: Time

DMaxSupplAspect

Description: Maximum distance before a signal from which a supplementary signal aspect can be assigned to a train.

Type: Distance

DMaxAnnouncement

Description: Maximum allowed distance between the front end of the train and the signal protecting the location of the L2 level transition for sending the announcement of the transition to level 2.

Type: Distance

DangerPoint

Description: Distance from the signal to the danger point in relation to the direction of the signal.

Type: Distance

ILSAssigned

Description: Is the signal assigned to the ILS?

Type: Boolean
