I agree, the field 'distance' is implemented as length in [m] and documented in the same way. Therefore only the examples are wrong and misleading.

I'll change them: <http://trac.assembla.com/railML/ticket/180>

If certain exporting and importing Programs agreed to use the field 'distance' with [km] it's fine for them. For a new implementation within a future version 2.2, the field should be used with [m].

Kind regards,

Joachim
