Hello,

I almost got a little envious as I heard that the timetable-scheme soon gets to a version 1.0 ... ;-)

No, I'm confident that the infrastructure-part will reach this milestone soon, too.

There are many changes that I already mentioned in spring, which will be implemented in the next release (as I discussed with Ulrich Linder).

resulted in a list with many new considerations. For most of them, an integration in the version 1.0 is too early.

But we agreed that crossings and cross-junctions are too important to be not considered in version 1.0, because they belong to the elementary topology elements.

Other opinions?

of these elements and will post some suggestions in this newsgroups.

I hope, there'll be a fertile discussion about it, which will lead to a successful integration into version 1.0.

Best regards,
Matthias Hengartner

P.S.: Due to military service, I won't take part in these discussion for the next 3 weeks.
