Hello everybody,

here's a new suggestion for the timetable-schema, together with a little
example. I tried to include everything that was suggested here in the
forum as well as every new field that was recommended within my work
with program interfaces for DB and SBB.

If you are missing something, or if there is the need to add or change
parts of the schema, please mention it soon here in the forum!

Best wishes from Zurich,
J.Rubröder

Hi,

I can't read the schemes. the links are broken.

regards D.Hauptmann

Hello,

in addition to the suggested timetable-schema 0.96 I'm planning some renaming, documentating and reconstructing of the existing elements, to get a more consistent Version for 1.00:

dynamics:

with some slightly changing and renaming will now look like this:

brakingSystem optional string
brakedWeightPercentage optional decimal
timeSurcharge optional decimal
loadSurcharge optional decimal
trainProtection optional string

Are there any suggestions or serious arguments against this change from

the users of this element?

Best regards from Zurich,
Joachim Rubröder
