Hello.

In connection with formations of rollingstocks
that I sent rollingstock news group, our
suggestions(requests) for timetable scheme
is to enable to handle 'train operation'.

We hope technical, physical specification
for rollingstock is defined on rollingstock
scheme only. So now we don't use "compositions"
and "header" elements in our system. But we
would like to use elements for train operations
relating to the timetable.

  Our draft files are at
   https://www.jrsi.co.jp/railml/timetableJ/
   timetableJ.xsd.xml --- scheme difinition file
      please get it and rename to timetableJ.xsd
   timetableJ.xml --- example data file
   timetableJ.pdf --- an explanation file

Comments or questions are welcome.

Best regards from Tokyo
