Hello friends of RailML,

is there a way to define the orientation of a formation somewhere along the train course? We can define the changes of direction, but this still leaves open how the formation is oriented at the beginning of the course. An attribute "orientationAtTrainPartStart" at the trainPartRef would help.

Best regards

Andreas Tanner.

Hi Andreas,

as discussed on 19.3.2012, we are planning to introduce a new attribute "orientationReversed" for this purpose with version 2.2.

Best regards,
Joachim Rubröder
