Subject: new RailML examples

Posted by   on Mon, 26 Mar 2012 10:03:04 GMT

Hello to all,

there always has been a great "demand" on examples for RailML. So, I
created some examples especially for some special cases, e. g.
  - mileage changes,
  - trains and train parts, coupling and sharing of trains,
  - complex operating days with and without actual dates,
  - "midnight overrun",
  - train.scope - primary key of trains,
  - circulation plans.

Due to the sometimes complex character I did want to use some special
formatting. Since I am not familiar with Wiki my only option was to
publish it in PDF files. But tanks to the help of Susanne, I at least
created some links from the pages of this little Scandinavian (Wiki) to
the PDF files.

These examples are in German only so far. This is not an affront to
English-speaking fellows but a question of time. If anybody is interested
and wants to read one of the examples in English, please do not hesitate
to contact me. I will then "take the opportunity" and translate it.

The examples are linked to our iRFP download area since I am not aware how
to upload them to wiki.railml.org. If anybody wants to copy them to a more
public area (Alexander do you here me?) please feel free to do so. (But
please do not move them...)

All the new examples together can be visited at
http://www.irfp.de/download/railml_doku_beispiele.pdf .

And at last, if anybody has suggestion, recommendations, errors, or wishes
for a certain more example, please also do not hesitate to contact me.

Thank you! And best regards to all,
Dirk.
