Hello everybody,

as requested by Peter Brandt at the railML conference in Zurich, the
'messageText' in the TT-element 'connection' should be internationalized.

That could only be achieved by changing it from an attribute into an
element with the additional attribute 'xml:lang'. Anyway it may also occur
more than once for different languages.

http://trac.assembla.com/railML/ticket/211

the requested new element 'messageText' is now available:

http://trac.assembla.com/railML/changeset/505

Please check if this implementation is according to your needs!

Kind regards,
Joachim
