Subject: new template for inherited attributes in wiki Posted by Joerg von Lingen on Sat, 12 Feb 2011 11:37:14 GMT View Forum Message <> Reply to Message

Dear all,

as some elements inherit attributes from basic types it is useful to describe these attributes at one place and insert them automatically in the element description. Therefore I have created the template "inheritIdName", which is called in section 'inheritedAttributes' of the element description. Subsequently the changes of the type 'tElementWithIDAndName' (and in the template) will automatically inserted in relevant pages.
