Hello Everyone,

my name is Sebastian Freitag and I am currently working on a software development project that will have a railML component. Mr. Kolmorgen pointed me to this group and I am happy to participate.

Let me describe our project a little bit: We are developing a SaaS solution that allows to gather information from users to support train operation and maintenance. In order to implement rich and easy input forms for mobile app users and browser users, the tool will be able to import railML data for context. This will allow drop-down UI elements, selectors and all the fancy easy stuff and limit error-prone free text input to an absolute minimum. This project is for a industry customer. I will not disclose the customer here, maybe he will introduce himself in a later stage and I do not want to take that away from him.

To give you an idea about my personal and professional background - I have a Diploma in Computer Science and my studies focused on theoretical computer science and math. During my about 10 years of professional activity I suffered some exposure to web IT tech, mobile distributed systems, car IT, test automation and databases. Currently I work as project leader and do not get to program as much as I would like to. I currently work in Munich, Germany.

It is not yet clear which topic (infrastructure, rollingstock, timetable or xml-stuff) will be most interesting for my company and me. But I hope this group will be a good place to leave feedback (for the coordinators) and to ask questions (to everyone).

German group members may find and add me on xing, anyone may contact me about railML topics by mail if so desired.

Best Regards,

Sebastian Freitag

Dear Mr. Freitag,

thank you very much for your forum posting.

A warm welcome in the railML community and good speed for developing your railML interface.

Do not hesitate to ask question if you don't find a solution in railML's wiki pages (<http://wiki.railml.org>).

It would be great if you could present your company and the interface during our next railML conference in Vienna (March 17th; registration is open via <http://railml.org//index.php/naechstes-treffen.html>).

Best regards,

--
