Dear railML timetable community,

the decision has been made to provide a railML version 2.4. Currently the scope for this release can be found in the TRAC ticket system - Link to TT tickets.

I would like to ask you to review your running projects and to formulate any timetable related requirements to a new version 2.4 in this forum until the end of April 2017.

Please provide a description here in the forum with:
1. Background and use case
2. Importing and exporting tools involved
3. Examples and any further information

Please feel free to contact me if you have any further questions.

Best regards,

Philip Wobst
