Subject: Floor height
Posted by Torben Brand on Tue, 03 Oct 2017 14:33:26 GMT

Hi,

Is there a way to map the vehicles floor height of the passenger compartment in railML?
I see the floor height of the entrance and the gangway is mapped, but not the general floor height
of the passenger compartment.
This would be useful for us to know in relation to entry and exit speeds, amongst others.
It could be different than the entrance height. It could also have multiple values, indicating internal
levels/stairs or a duplex/two story wagon.

Hi Torben,

a value for the general floor height didn't seem necessary yet. So if you have a
particular purpose in mind do not hesitate to name it.

The height of entrance is intended for "compatibility" to platform heights of a
line. In case of modern EMU/DMU this is often the general height inside except
there are ramps or steps inside.

The (inner) height of gangway is intended to give information about the inner
size of the passage between vehicles. If you look for "compatibility" to other
vehicles than this is given with the "position" and "designType" attributes.

Best regards,
Joerg v. Lingen
