
Subject: Marking @frontier and @chargeFrontier as DEPRECATED?

Dear all,

the OCP contains the following two boolean attributes whose meaning (and therefore usage) seems to be unknown:

* <ocp><propOther>@frontier

* <ocp><propOther>@chargeFrontier

Who uses these attributes and for what?

If nobody shows their interest in these attributes, I am going to mark these attributes as DEPRECATED for railML version 2.4.

Best regards

Christian

I filed a Trac ticket for this issue [1].

[1] <https://trac.railml.org/ticket/341>

Best regards
Christian

based on received feedback the modification described in [1] has been
implemented with railML version 2.4.

Best regards
Christian
