Subject: interlocking -> signalling
Posted by Stefan Hubrig on Wed, 08 Jul 2020 12:26:29 GMT

Dear railML Users,

since traditional borders disappear, I propose to rename the schema "interlocking" to "signalling" or something similiar in railML 3.2

Best regards,
Stefan Hubrig

Dear all,

I would support this suggestion as the content is more than just "interlocking".
Thus it will better describe the parts covered. This would allow as consequence
to rename the "signalBox" to "interlocking".

But it shall be clear to everyone, that backward compatibility to v3.1 is voided.

Best regards,
Joerg v. Lingen - Interlocking Coordinator
