Subject: [railML3] ETCS signal/panel

Dear all,

for railML 3.2 it was proposed to deprecate the attribute @srsVersion in element <signalS/isEtcsSignal> as it seems not to be used or needed (see [1]).

As we are approaching towards railML 3.2 release, I want to ask you whether you agree with this proposal and which other features of an ETCS signal/panel shall be modelled apart from what is already modelled (see [2])

Any feedback until end of February 2022 is highly appreciated...

Dear all,

since there have been no objections, the attribute @srsVersion in element <signalS/isEtcsSignal> will be deprecated in upcoming railML 3.2.

Best regards

Christian
